Think of what that means. Fill a 200 gallon tank in less than 7 minutes. That’s real time saved… every time you fill the tank.

Industry leading flow isn’t the only reward you will reap. The patent pending, UL listed Ultra Hi-Flow nozzle takes fuel transfer to a new level with features like:

- Angled inlet places the hose in a more natural downward position, reducing stress on the hose for easier maneuvering and improved hose wear.
- Ergonomically designed handle offers comfortable grip while providing room for the use of gloves when necessary.
- Trigger provides variable flow rates, and features 3 locking positions for different fueling applications.
- Integral hook and spout spring ensure the nozzle stays where you put it.
- Revised, high efficiency internal seal technology lets you tame or unleash the flow while delivering maximum flow with as little as 10 psi.
- Automatic shut off completes the fueling process for you.

For transfer of gasoline, diesel, or kerosene to large fuel capacity farm, fleet, or construction equipment, there is simply no better choice. Fueling has never been easier… or quicker. Don’t let your nozzle slow up your work when it is most critical. At Fill-Rite, we understand that time is money.

SO WHAT IS YOUR TIME WORTH?
